

國立中央大學九十學年度碩士班研究生入學試題卷

所別: 太空科學研究所 不分組 科目: 普通物理 共 1 頁 第 1 頁

1. Three masses are hung over two pulleys, as shown in Fig.1. The pulleys are massless and frictionless. (15%) Assume that $m_1 > (m_2 + m_3)$ and $m_2 > m_3$. Show that the tension in the rope supporting the fixed pulley is

$$T = \frac{16m_1m_2m_3g}{m_1(m_2 + m_3) + 4m_2m_3}$$

2. A 60-g tennis ball traveling at 30 m/s strikes a wall and rebounds in the opposite direction with 81% of its (15%) initial kinetic energy. What is the magnitude of the impulse (change in linear momentum) on the ball?
3. Water fills a length ℓ of a U tube, as shown in Fig.3. The water is slightly displaced and then allowed to (15%) move freely. (a) Show that the liquid executes simple harmonic motion. (b) What is the period?
4. Find the change in entropy when 1 kg of ice at 0°C is added to 1kg of water at 100°C in an insulated (15%) container. ($L_f = 334 \text{ kJ/kg}$, $L_v = 2260 \text{ kJ/kg}$, $C_w = 4190 \text{ J/kg}\cdot\text{K}$)
5. A parallel-plate capacitor has plates of area A separated by a distance d and is connected to a battery with a (15%) potential difference V . A metal block of thickness ℓ is midway between the plates, as shown in Fig.5. What is the work required to remove the metal block given that the battery remains connected.
6. A coil of radius 25 cm has 15 turns and lies in the xy plane. It carries a current of 2 A, as in Fig.6. Find the (15%) torque on the coil for $\vec{B} = 0.2\vec{i} \text{ T}$.
7. What is the de Broglie wavelength of an electron accelerated from rest by a potential difference of 54 V (10%) ($h = 6.626 \times 10^{-34} \text{ J}\cdot\text{s}$, $m = 9.11 \times 10^{-31} \text{ kg}$, $e = 1.6 \times 10^{-19} \text{ C}$)
